Most Android phones use a version that is mostly provided by Google and requires Google Fi has improved the international roaming offered with its plans, and improved overall iPhone compatibility. Google tripled its 5G coverage abroad, bumping the number of countries where users can roam on 5G from 26 to 39. (Full-speed 4G is available in over 200 countries.) Fi's Unlimited Plus plan has no extra roaming charges, so all your 50 GB of monthly full-speed data is available even overseas. Google also extended international 5G service to Samsung phones, instead of just its own Pixel phones, Google added international mobile hotspot and Wi-Fi calling, features that previously only worked with Android phones on Fi. Google Fi plan pricing remains unchanged. Following T-Mobile's announcement that customers of other carriers can switch to T-Mobile quickly and easily using only the T-Mobile app and eSIM technology, Verizon wants to remind people that it offers the same feature within its My Verizon app. Customers of other carriers with a Verizon app to set up a new account and activate the phone with Verizon right away, without needing to visiting a store or have a physical SIM card mailed to them, eSIM-capable phones include most recent Apple iPhones and Google Pixels, as well as certain recent Apple iPhones and Google Pixels are certain recent Apple iPhones and Google Pixels are certain recent Apple iPhones and Google Pixels ar updated its main T-Mobile app to enable customers of other carriers to switch to T-Mobile line from right within the app, using eSIM technology, eSIM is found in recent Apple iPhones, Google Pixels, and many recent Samsung phones. Optionally, users can use this feature to activate a free three-month trial of T-Mobile's network as a second line, while keeping their existing service on the phone's primary SIM card. The feature is available now for both iOS and Android. T-Mobile has launched the Wiko Voix, a new Android phone that runs just \$126. The phone is also launching with Metro by T-Mobile for \$120. The last Wiko-branded phones for US carriers, including the AT&T Calypso series and Cricket Icon series. Although Tinno has not traditionally touted its own brand in this part of the world, the company has launched a new US web site. Key specs of the Wiko Voix include Android 12, 6.5-inch HD+ display, 3,400 mAh battery, 13 megapixel camera, rear fingerprint reader, 3 GB RAM, 32 GB storage, and a memory card slot. Motorola has taken the wraps off its new Edge phone for 2022. This is the little sibling to the Edge+, the company's flagship phone. It keeps many of that phone's best features, including a 50 megapixel main camera, large FHD+ OLED display with 144 Hz refresh and HDR10+, 30W fast charging, 5G, Wi-Fi 6E, and NFC. And yet it's half the price at \$500. It also represents a big win for Motorola as the first time since 2017 that a Motorola phone this high-end will be offered by all three top-tier US carriers. To achieve the lower price point compared to the Edge+, the new Edge (2022) uses a MediaTek Dimensity 1050 chip, the wide-angle camera is 13 megapixel instead of 50, the selfie camera is 32 megapixel instead of 60, and it drops stylus support. Camera features include 960 fps super-slow-motion and 4K HDR video capture. Its 6.6-inch main display hides an optical fingerprint reader and is protected by Gorilla Glass 3. The rest of the body is plastic, but with a back that looks like matter glass. Motorola boasts that this is one of its thinner and lighter phones, despite having a large 5,000 mAh battery. It supports Ready For, Motorola's unique software for hooking the phone up to large displays and other accessories for big-screen-optimized video streaming, gaming, and productivity apps. It ships with Android 12, but Motorola has improved its software commitment to three full OS upgrad of bi-monthly security updates. It will come in one color: Mineral Gray. T-Mobile will launch it first, "in the coming weeks", offering it with 8 GB RAM and 128 GB storage for \$498. Verizon's version will have 8 GB RAM and 128 GB storage for \$498. Verizon's version will have 8 GB RAM and 128 GB storage. US Cellular, Spectrum Mobile, and Visible will also offer it. Motorola's unlocked version will have 8 GB RAM and 256 GB storage; it will sell for \$500 for a limited time, after which it will run \$600. It will be available from Best Buy, Amazon, and Motorola.com. Google has announced that a final version of Android 13 is available starting today for recent Pixel devices (Pixel 4 and newer). Version 13 doesn't bring huge changes, but rather a long list of small improvements, primarily around privacy and visual personalization. Public beta versions have been available for a few months. The final release will roll out for newer third-party phones over the next few months. Bold (a sub-brand of Blu) has announced its first phone with 5G optimized for a US networks, including mid-band 5G (bands 41 and 77). The N2 is an affordable unlocked phone with very good support for T-Mobile's 5G and 4G networks, including mid-band 5G (bands 41 and 77). The N2 has a 6.6-inch, full-HD, curved-edge AMOLED display. It has a 4,200 mAh battery and supports 30-watt fast charging. It's powered by a MediaTek Dimensity 810 chip paired with a generous 8 GB RAM and 256 GB storage. On the back is a 64 megapixel main camera and 5 megapixel main camera and 5 megapixel wide camera. The front sports a 16 megapixel main camera and 5 megapixel wide camera with its own dedicated depth camera for portrait-mode selfies. It has an in-display fingerprint reader and runs Android 11. The tealtinted body is "designed with deluxe textured leather and metal housing using premium, high-end materials". It will sell for \$349 on Amazon, but Blu is offering a launch-day "flash launch deal of \$100 off where early birds can snag it for \$249 while supplies last." Samsung has announced its newest generation of foldable phones: the Galaxy Z Fold4 and Galaxy Z Flip4. Both have similar designs and features compared to their predecessors, with a slew of small updates and refinements across the board. Both have been updated main cameras that perform better in low light. Both have a "slimmer hinge", although the difference appears to be slight. Both are constructed from Armor Aluminum and Gorilla Glass Victus for durability, in addition to IPx8 water resistance. The Galaxy Z Flip4 has slightly slimmer bezels on the main display, a larger (3,700 mAh) battery, and 14% faster charging. The cover display has been enhanced with more functionality, including SmartThings home controls and Quick Shot in camera mode. Similarly, Flex Mode — when the phone is half-folded — now provides a special split-screen interface for more apps, particularly third-party social and video apps. Like the Z Flip3, it has dual 12 megapixel rear cameras, display refresh up to 120 Hz, mmWave 5G, and two-way wireless charging. Also like the Z Flip3, the Z Flip4 will start at \$1,000 for the base model with 128 GB storage (and 8 GB RAM). A 256 GB version will also be available, as well as a new 512 GB option. It will come in Bora Purple, Graphite, Pink Gold, and Blue. On samsung.com, a Bespoke Edition will allow users to mix and match frame and cover colors in 75 different possible combinations. The Galaxy Z Fold4 is slightly lighter and more compact than the Z Fold3, while offering wider displays inside and out. The 7.6-inch main flexible display panel is brighter, 45% "stronger", and better hides the under-display camera. The main camera is upgraded to 50 megapixel, while the telephoto camera is now 10 megapixel instead of 12. The software has been overhauled thanks to Android 12L, Google's new version of Android optimized for foldable and large-screen devices exactly like this one. A new task bar floats at the bottom of the main display, and there are new options for split-screen multi-tasking and Flex Mode. Some apps can now be opened in two side-by-side instances of the same app. Other features and specs are similar to the Z Fold3, including the 6.2-inch HD+ AMOLED outer display with 120 Hz refresh, UWB, S Pen compatibility, 12 GB RAM, and two-way wireless charging. The Galaxy Z Fold4 will start at \$1,800 with 256 GB storage. It will also be available 512 GB or a new 1 TB option. It will come in Graygreen, Beige, and Phantom Black, as well Burgundy exclusively from samsung.com. Both phones. Customers who pre-order will receive a free storage upgrade and a free case. Preorders for the Z Fold4 will also come with a \$100 Samsung Credit. Various trade-in offers are available depending in where you buy from. AT&T's is the most generous, at \$1,000 off either phone when trading in any Galaxy phone, in any condition. That offer is available to all customers and makes the Z Flip4 free. continued > Google has notified developers that they need to prepare their apps for a new way the "back" gesture will display an animation as the user performs the swipe gesture that shows a preview of the screen that "back" will take them to. This will allow users to pause mid-gesture and decide whether to continue or cancel the action. T-Mobile has announced it latest series of T-Mobile-branded affordable phones, the REVVL 6 5G and REVVL 6 Fro 5G. They will sell for \$170 and \$220, respectively. The REVVL 6 5G has a 6.52" HD+ display, 4,500 mAh battery, 13 megapixel main camera, 4 GB RAM, and 64 GB storage. The REVVL 6 Pro 5G has a 6.82" HD+ display, 5,000 mAh battery, wireless charging, 50 megapixel main camera, NFC, 6 GB RAM, and 128 GB storage. Both phones have a fingerprint reader and 15-watt fast charging. The REVVL 6 series will be available on August 4th from both T-Mobile and Metro. Both phones are powered by the MediaTek Dimensity 700 chipset and Android 12. The phones were brought to market quickly using GMS Express, a program offered by MediaTek and Google that streamlines the software development, testing, and certification process for phones are manufactured by Wingtech, which also made the REVVL V series. Google has released Android 13 will feature support for Bluetooth LE Audio, as well as new personalization and privacy features. Google's Switch to Android app for iOS now makes it easy for iPhone users to move data like contacts, calendars, and photos to any new Android 12 phone. The app initially supported only Pixel phone users to move data like contacts, calendars, and photos to any new android 12 phone. The app initially supported only Pixel phone users to move data like contacts, calendars, and photos to any new android 12 phone. The app initially supported only Pixel phone users to move data like contacts, calendars, and photos to any new android 12 phone. The app initially supported only Pixel phone users to move data like contacts, calendars, and photos to any new android 12 phone. The app initially supported only Pixel phone users to move data like contacts, calendars, and photos to any new android 12 phone. water and dust rating, and MIL-STD-810H certification for drops, altitude, humidity, immersion, salt fog, dust, and vibration. Corning Gorilla Glass Victus+ protects the display, which is designed to work with gloves and wet fingers. The phone also has a removable 4,050 mAh battery, yet is only 9.9mm thick. The body includes two customizable shortcut buttons and POGO pins for dock charging. DeX support lets the phone offer a PC-like experience by connecting an external display, keyboard, and mouse. The phone comes with Android 12 plus four OS upgrades and five years of security updates. Specs include a 6.6-inch LCD display with 120 Hz refresh, 5G, Wi-Fi 6E, NFC, and a fingerprint reader. It has 6 GB RAM and 128 GB storage, expandable via microSD card. The main camera 50 megapixel wide-angle camera and 13 megapixel front camera. North America is not in the list of markets where the phone is launching this July, but Samsung promises "availability expanding to other regions at a later date". version has been approved by the FCC with excellent support for US 4G and (sub-6) 5G networks. AT&T has offered the XCover series in the past. Arm has revealed 2022 Total Compute Solutions (TCS22), its next-generation CPU and GPU designs for mobile devices including phones, with a focus on improved mobile gaming performance. All-around performance of this year's solution is up to 28% better, with up to 16% power reduction. The new second generation Armv9 CPUs are designed to improve performance, efficiency, and scalability across the board, but "especially for gaming". Complementing those are a new range of Arm GPUs for advanced 3D graphics, including a new Immortalis brand for flagship GPUs that are even more powerful than the Mali line. The Immortalis-G715 is the first Arm GPU to offer a 15% performance improvement compared to the previous generation. On the CPU side, the new Arm Cortex-X3 delivers "a 25% performance improvement compared to the latest Android flagship smartphone". The new Cortex-A715 replaces the A710, offering 20% better energy efficiency and 5% better performance. For context, this matches the performance of the Cortex-X1. Meanwhile, an updated Cortex-A510 "little" core offers a 5% power reduction. A newly updated DSU-110 interconnect supports 50% more CPU cores (up to 12) and supports a high number of Cortex-X3 cores. With TCS22, Arm is also introducing two new security technologies to address memory safety vulnerabilities: Asymmetric Memory Tagging Extension (MTE) and Enhanced Privileged Access Never (EPAN). Apple, Qualcomm, MediaTek, Samsung, and Google all use Arm's designs and technology as a starting point for their own processor chips that power essentially all of today's phones. New mobile startup Nothing has released a photo showing the official design of its upcoming smartphone, the phone (1). The unique design has a transparent back that exposes several components, including the NFC coil antenna. The company will hold a launch event to reveal further details on July 12th. Nothing was founded by Carl Pei, the former co-founder of OnePlus. Videos that have been released subsequently show the lightest white parts lighting up and flashing. WhatsApp now supports Apple's "Move to iOS" system, making it easy for users to switch from an Android phone to an iPhone without losing their WhatsApp chat histories. Move to iOS consists of an Android phone to an iPhone without losing their WhatsApp chat histories. Move to iOS consists of an Android phone to an iPhone without losing their WhatsApp chat histories. bookmarks, mail accounts, and calendars to a new iPhone. It transfers the data over a temporary, private Wi-Fi network between the two phones. WhatsApp data in Move to iOS. WhatsApp data has quietly announced WeatherKit, a new API that will let app developers integrate "hyperlocal" weather forecast data into their apps. This is the same kind of specific weather data previously offered by DarkSky, which Apple acquired in 2020. WeatherKit will be available across platforms — including Android — via a standard REST API. A Swift API will also be available on Apple platforms. The data available includes 10-day forecasts as well as a minute-by-minute precipitation forecast for the next hour. Wind and UV data will also be available. Google has released Android 13 Beta 3, which brings the OS to a key milestone known as Platform Stability. This means that new APIs used by developers are now finalized and won't change, so devs can move full speed ahead with Android 13 versions of their apps. Google is adding full support this important accessibility hardware without needing any extra software like BrailleBack. Google is also improving the braille experience on Android with new shortcuts. "Now there are shortcuts for navigating so it's easier to scroll and move to the end of documents or selecting, copying and pasting." The braille features are part of Talkback, the accessibility suite that assists blind and low-vision users. The new braille support will roll out first as part of the next beta version of Android 13. Google is revamping the user interface of Android Auto, again. Split-screen mode will now be standard on all screen types and sizes, giving users immediate access to functions such as audio, messages, and maps, all on one screen. The interface will also flow to fill different screen shapes better, including ultra-wide and portrait displays. The new version of Android Auto will also update Google Assistant with new "contextual suggestions" for actions such as suggested replies, sharing arrival times with a friend, and playing recommended music. The new Android Auto will roll out "in the coming months". Google has announced that it will bring end-to-end encryption to group conversations in its RCS-based Messages app, starting with an open beta "later this year". End-to-end encryption is already available for one-on-one conversations. securely access and share one unified set of health and fitness data across Android devices. The new Health Connect platform and API provides a central place on the device to store data such as activity, sleep, nutrition, body measurements, and vitals like heart rate and blood pressure. It also includes security, privacy, and permission features that give users "granular controls". Users must give permission for each app to have access, and users "will have the ability to shut off access or delete data they don't want on their device, and the option to prioritize one data source over another when using multiple apps." Google has developed Health Connect in partnership with Samsung. MyFitnessPal, Leap Fitness, and Withings have already started working with the platform, and it is now available to all developers. In the coming weeks, Google Wallet that replaces the G Pay / Google Wallet that replaces the G Pay / Google Wallet that replaces the G Pay feature of Android. It will continue to support digital credit and debit cards, boarding passes, tickets, transit cards, vaccine cards, and student IDs. But Google is finally adding official support for state and government ID cards, including Digital Driver's Licenses in the US. You will be able to present your Digital Driver's Licenses in the US. Google will update Android and Chrome this summer to automatically use a one-time virtual credit card number when entering credit card fraud due to a data breach. Sony has revealed its latest flagship phone, the Xperia 1 IV. It's the world's first phone with a true optical zoom lens that can adjust seamlessly from 85 to 125mm. The phone also has standard (24mm) and wide (16mm) lenses. All three lenses have the same 12 megapixel, 1/1.7" Exmor RS sensor with "Eye AF" 60 fps continuous auto-focus and exposure, and the ability to shoot 4K HDR video at up to 120 fps. The standard and zoom lens also have OIS. There's also a dedicated shutter button. The front camera has been upgraded with a professional Sony Alpha camera. Every other spec and feature is top-end. The Xperia 1 IV also has an OLED display with 4K resolution, HDR, and 120 Hz refresh. It's powered by Qualcomm's top-end Snapdragon 8 Gen 1 processor paired with 12 GB of RAM. It has 512 GB storage and a memory card slot. It also has a 5,000 mAh battery and two-way wireless charging. The body features Gorilla Glass Victus on the front and back, with a frosted finish on the back. It's also rated IP65/68 for water and dust. It has a 3.5mm headphone jack, stereo speakers, 360 Reality Audio, High-Resolution Audio, and is "ready for" Bluetooth LE Audio. The Xperia 1 IV has excellent support for Verizon and T-Mobile 5G and 4G networks in the US, including mmWave 5G, as well as Wi-Fi 6E. It will come with Android 12. Color options include black and purple (available exclusively from Sony's web site.) It will ship September 1st, 2022 and is priced at \$1,600. Pre-orders start today and, for a limited time, include Sony's latest WF-1000XM4 true wireless noise cancelling earbuds (a \$280 value.) Android 13 has reached the public beta phase on the road toward a final release some time after July. Android 13 Beta 1 is available now for eligible Pixel phones. The first preview release was made available to developers in February. It introduced a new photo picker, themed app icons, and better quick settings tiles for third-party apps. The new Beta 1 introduced a new photo picker, themed app icons, and better quick settings tiles for third-party apps. The new Beta 1 introduced a new photo picker, themed app icons, and better quick settings tiles for third-party apps. access to your audio files will not also be granted access to your photos and videos, for example. Google promises they will have "more to share" about Android 13 at next month's Google I/O event starting May 11th. Motorola has announced two new mid-range phones with 5G. Both are essentially 5G upgrades of existing 4G models already announced

upgrades compared to both last year's model and this year's 4G model base version has 4 GB RAM and 128 GB storage, versions will also be a blue. The moto g 5G is essentially a 5G version of the moto g power (2 GB RAM and 64 GB storage. An unlocked version will also be available committing to three years of bi-monthly (every other month) security major OS update. This mirrors a similar set of features offered by Apple for its e of its 2022 lineup of affordable Galaxy A-series phones. The es are 6.7", 6.5", and 6.4", respectively. The A53 has a 64
models have 5G, a large 5,000 mAh battery, 25-watt fast charging, exp. A series for the first time, such as 12-frame night mode, auto frame rad A33 and A53 (shown in photo) will be available in black, white, blue, as well as AT&T and Samsung.com on April 1st. It will start at \$450 are to the Messages app, Google is also adding grammar correction to the understands a "pay for parking" command, which automatically pays for	pandable storage (up to 1 TB), and a fingerprint reader. The stereo speak ate for better low-light video, and enhanced portrait mode with better edge and peach. Samsung also announced an A23 for markets outside the US to and come with 6 GB RAM and 128 GB built-in storage. Pre-orders start to be Gboard, Google's smart onscreen keyboard. Live Transcribe will now ha for car parking if you are parked in a street spot enabled with ParkMobile	kers have been made louder and support Dolby Atmos. The body uses Cope detection. The phones ship with Android 12 (Samsung One UI 4.1), a hat steps down the specs with 4G and an LCD display. Samsung isn't collay and are eligible to receive a pair of Galaxy Buds Live. Google is using the ability to work offline. Nearby Share is being updated to let you be, available in over 400 US cities. This feature also includes new comm	teps down the resolution a bit with a 48 megapixel main camera, 8 megapix Corning Gorilla Glass 5 and provides IP67 water resistance. Samsung has been and Samsung will offer an industry-leading four generations of major OS upcommenting on US launch details for the A73 and A33 just yet, but the Galaxing the modular nature of Google Play Services to add new features to Andrauckly share media or files with multiple people nearby at once, instead of ands "parking status" and "extend parking". Google today started rolling out Phone user "likes" or "loves" (etc.) a message in a conversation, it will now	rought some key camera features from its flagship phones to the odates. Samsung calls the new design Ambient Edge; both the ky A53 will be available on March 31st at T-Mobile and Verizon, oid in-between major OS updates. In addition to major updates if just one person at a time. Finally, Google Assistant now at a major update to its Messages app, the default SMS and RCS
instead of a whole separate message with the original text repeated. E between iPhone and Android devices defaults to the outdated SMS/MM your messages into Personal and Business tabs. Messages can now als will now be an option to share a link to that video on Google Photos insbring the link-sharing feature to photos as well in the future. Most of t preserving user data. The goal is to let users free up storage space, but The phone was first launched in China in January. The company also a	Emoji reactions work between iPhones using Apple's protocol originally k MS protocols, which do not support newer features like reactions. So rea so automatically delete one-time password messages after 24 hours, redusted of sending the video itself. That will enable users to share high-quathese features are available first for the English language only, with othe ut help developers "prevent unnecessary uninstalls". After a period of relationary of the sannounced a new focus on Canada and Mexico and an expansion to South	nown as iMessage. They also work between Android phones using the ctions are sent in plain text. This is still the case, but Messages will not using inbox clutter. It can also help remind you to reply with "gentle nuality videos with iPhone users, instead of sending a very low-quality vider languages to follow. The new version of Messages will "roll out over tative silence outside of China, OnePlus has given an update on its global America, dramatically expanding its presence in the western hemisph	open, industry-standard RCS protocol. But because iPhones do not support w intercept and "translate" these messages to present them properly. Another diges when it detects that you may have stopped in the middle of a converse ovia the outdated MMS protocol as before. (RCS allows sharing high-qualthe coming weeks". Later this year, Android will gain the ability to "archive all plans for 2022. The company's current flagship phone, the OnePlus 10 Prere beyond the US. OnePlus also announced that its OxygenOS flavor of Android will gain the ability to "archive all plans for 2022.	RCS and iMessage is a closed and proprietary, communication her new feature is Organized inbox, which automatically sorts sation for a period of time. Finally, when sharing a video, there lity videos directly with other Android users.) Google says it will "apps, a new action that remove around 60% of an app while to 5G, will launch in North America by the end of March 2022. Indroid will remain "independent", a major change from the
previously-announced strategy of fully merging OxygenOS with sister better build quality", OxygenOS 13 will have "an experience that long-	brand Oppo's ColorOS. That move was controversial. "This new course w	was taken in accordance with feedback from our Community", according arks of OxygenOS". This means "a light and clean experience that is clo	g to OnePlus founder Pete Lau. While the two OSes will still have a merged ose to stock Android and oriented towards usage globally". Finally, OnePlus	codebase on the back-end "to allow for faster updates and
