Learn more about our Bug Bounty Program here. Pure instant messaging — simple, fast, secure, and synced across all your devices. One of the world's top 10 most downloaded apps with over 500 million active users.FAST: Telegram is the fastest messaging app on the market, connecting people via a unique, distributed network of data centers around the globe.SYNCED: You can access your messages from all your phones, tablets and computers at once. Telegram apps are standalone, so you don't need to keep your phone connected. Start typing on one device and finish the message from another. Never lose your data again.UNLIMITED: You can send media and files, without any limits on their type and size. Your entire chat history will require no disk space on your device, and will be securely stored in the Telegram cloud for as long as you need it. SECURE: We made it our mission to provide the best security combined with ease of use. Everything on Telegram, including chats, groups, media, etc. is encrypted using a combination of 256-bit symmetric AES encryption, 2048-bit RSA encryption, and Diffie–Hellman secure key exchange. 100% FREE & OPEN: Telegram has a fully documented and free API for developers, open source apps and verifiable builds to prove the app you download is built from the exact same source code that is published. POWERFUL: You can create group chats with up to 200,000 members, share large videos, documents of any type (.DOCX, .MP3, .ZIP, etc.) up to 2 GB each, and even set up bots for specific tasks. Telegram is the perfect tool for hosting online communities and coordinating teamwork.RELIABLE: Built to deliver your messages using as little data as possible, Telegram is the most reliable messaging system ever made. It works even on the weakest mobile connections. FUN: Telegram has powerful photo and video editing tools, animated stickers and emoji, fully customizable themes to change the appearance of your app, and an open sticker/GIF platform to cater to all your expressive needs.SIMPLE: While providing an unprecedented array of features, we take great care to keep the interface clean. Telegram is so simple you already know how to use it.PRIVATE: We take your privacy seriously and will never give any third parties access to your data. You can delete any message you ever sent or received for both sides, at any time and without a trace. Telegram will never use your data to show you ads.For those interested in maximum privacy, Telegram offers Secret Chats. Secret Chat messages can be programmed to self-destruct automatically from both participating devices. This way you can send all types of disappearing content — messages, photos, videos, and even files. Secret Chats use End-to-End Encryption to ensure that a message can be read by its intended recipient.We keep expanding the boundaries of what you can do with a messaging app. Don't wait years for older messengers to catch up with Telegram — join the revolution today.Terms of Use: Jul 4, 2025 Version 11.13 - Bug fixes and improvements. Most 3rd party messaging apps do not work very well with CarPlay...if at all. The ability to text using voice while driving...not unlike talking to someone in the seat next to you... is a utility that, for me, is a big differentiator. Viber doesn't do it; WhatsApp doesn't do it. This alone makes Telegram more viable for me. Whether it is end to end us secure as iMessage, I do not know. But all my friends do not have iPhones, so this is useful for sure. Addendum: They need to tune this up for CarPlay use. It comes closer than others, but needs work. I can receive a message and answer it, however, I cannot start a message nor can I answer one unless I do it right after hearing it. CarPlay capability is essential. Translation still needs work on both this and the mobile app. I bought a premium subscription because it's supposed to allow me to translate entire conversations rather than individual messages. But if the person you're communicating with ever chooses to write in your language instead of their own, the app seems disregard that 97% of the conversation happens in a language different from your own and stops offering to translate it for you.And it's inconsistent from desktop to mobile. Translation may be offered on one but not the other for the same conversation. It's frustrating to pay $35 for a feature that works only half the time or not at all. I understand the need to parse a user's conversation in determining whether translation should be offered. But that shouldn't be the only way for a user to translate a conversation. There should be some mechanism to allow premium subscribers to manually turn on translations in every conversation. The macOS version of Telegram is specially built specifically to work on macOS. It is an absolute pleasure to use. While the regular Telegram Desktop app is definitely good, it is a universal client that is built for deploying on Linux, Windows, and Mac all at once. The special macOS version is updated by a couple of dedicated Telegram team developers who work hard to make it as absolutely flawless as possible and keep it working SO well. I wish it was possible to put this much effort into the regular Telegram desktop client, but it is far more difficult since that one is deployed cross-playform. The developer, Telegram Messenger LLP, indicated that the app's privacy practices may include handling of data as described below. For more information, see the developer's privacy policy. The following data may be collected and linked to your identity: Location Contact Info Contacts User Content Identifiers Privacy practices may vary, for example, based on the features you use or your age. Issue: Unable to hide the Calls tab on iOSDescription: After disabling iOS Call Integration in Settings → Privacy and Security → Calls, the Calls tab still remains visible until the app is force-closed and reopened. Users expect the tab to disappear immediately when integration is turned off.Проблема: Невозможно скрыть вкладку «Звонки» на iOSОписание: После отключения интеграции звонков с iOS в Настройки → Конфиденциальность и безопасность → Звонки вкладка «Звонки» продолжает отображаться до принудительного закрытия и повторного открытия приложения. Пользователи ожидают, что вкладка исчезнет сразу после выключения интеграции.——Issue: Videos still download automatically despite disabling all auto-download settingsDescription: Even with Settings → Data and Storage → Automatic Media Download completely turned off for both Wi-Fi and mobile data, and Autoplay Video disabled, videos embedded in link previews continue to download automatically. This behavior bypasses users' preferences and consumes data unexpectedly.Проблема: Видео автоматически загружаются, несмотря на отключённые настройки автозагрузкиОписание: Даже при полном отключении Настройки → Данные и хранилище → Автозагрузка медиа для Wi-Fi и сотовой сети, а также при выключенном Автовоспроизведении видео, видео в превью ссылок продолжают загружаться автоматически. Это нарушает настройки пользователя и приводит к неожиданному расходу трафика. This application has proven to be disappointing, reaching its lowest point since 2023. It is apparent that the introduction of the premium subscription has shifted the focus towards pushing users into purchasing it, leading to an unfortunate degradation of the basic functionalities. Notably, the severe limitation placed on sending messages, even when used responsibly, is particularly concerning. As an illustration, I found myself unable to communicate effectively within work-related groups, where I was seeking job opportunities. The necessity to compose messages daily, amidst the flood of communication, to ensure visibility for potential employers is both impractical and counterproductive.Despite multiple attempts to address this issue through support inquiries, the lack of response is disheartening. Instead, I received a notification suggesting that the solution lies in acquiring a premium subscription – specifically, to regain the ability to send messages. This approach appears illogical and far from user-friendly. While I am inclined to assign a zero-star rating to reflect my discontent accurately, unfortunately, this option isn't available. I remain hopeful that a more competent alternative emerges in the near future, drawing users away from this application. The current state of Telegram leaves much to be desired and is becoming increasingly untenable for practical use. I've been using Telegram since its release and have always admired its innovative approach and useful updates. It used to be a platform that prioritized user experience, constantly rolling out features that genuinely made communication more efficient and enjoyable. However, over time, Telegram seems to have lost its way. The focus has shifted drastically, turning into what feels like a crypto heaven rather than a messaging app. Instead of addressing bugs or enhancing the core functionality, updates now feel like unnecessary data bloat with little to no value for long-term users. For example, free users are still stuck with very limited reaction options—a glaring issue that hasn't been addressed for years. Meanwhile, newer updates often introduce more problems than they solve. The latest update, in particular, has been a nightmare; it causes my iPhone 13 Pro Max to overheat to the point where it feels like it's hot as lava. Telegram's declining focus on free users is another disappointment. Features are increasingly locked behind paywalls, making the app feel more useless for those who don't subscribe. What was once a forward-thinking platform now seems more concerned with monetization than user satisfaction. The developer, Telegram FZ-LLC, indicated that the app's privacy practices may include handling of data as described below. For more information, see the developer's privacy policy. The following data may be collected and linked to your identity: Purchases Financial Info Location Contact Info Contacts User Content Identifiers Privacy practices may vary, for example, based on the features you use or your age.
