# 1-99 2017 CONSTRUCTION OSRS

Cheapest 99 construction guide osrs.

Content Construction in OSRS introduced Player Owned Houses. It's a home base players can continually build and show off to their friends. The houses are full of quality-of-life features that significantly increase the Runescape experience. Those features include unlimited jewelry teleports, portals to all the major cities, pools that regenerate your states, and more. There are so many benefits when leveling up Construction. Milestone perks are always just around the corner at any given level, leaving you wondering how you lived without them. This OSRS Construction Guide will give you some helpful tips and tricks to make the grind less tedious. Milestones On the topic of milestones, here is a brief list of what you can look forward to: Level 45 - Oak Altar Level 47 - Mounted Amulet of Glory (Unlimited teleports to Edgeville) Level 50 - Portal Chamber Room (Unlimited teleports to most cities) Level 55 - Armor Stand (Repair barrows equipment) Level 65 - Superior Garden Level 67 - Teak Shelves (+3 boost skills) Level 70 - Revitalisation Pool (Replenish run energy) Level 85 - Fairy ring Level 91 - Ornate Jewelry Box (Almost every jewelry teleport in one spot) OSRS Construction Guide & Getting Started There are a few things you must remember before getting into the Construction skill: You must be a member You must purchase a house from an estate agent Construction is a members-only skill in OSRS, which means you must purchase a membership. If you don't have a membership but do have gold, you can buy a bond and then use that to buy a membership in the game. Once you have a membership, visit the estate agent in Falador to purchase a house for 1,000 gold coins. You'll see a small house icon on the mini-map to signify where the estate agent is. You will also need a saw and hammer in your inventory to speed up crafting. If you have any clothes that can reduce weight, wear them. They'll help because you will be running back and forth a lot. Having your house near a bank will also be a huge help, as you'll need to refill supplies often. An idea to get more planks every resupply run is to have Phials unnoted noted planks (a house in Rimmington is best for this). At higher levels, it's best to use a servant to run for supplies. You'll need to be at level 40 and have two bedrooms furnished with a bed in your house to hire one. When you get to level 50, upgrading to the Demon Butler will make everything more efficient. These servants are pretty expensive, but the benefits far outweigh the costs. They will ask for payment every 8 tasks until you make a Servant's Moneybag at level 56. Putting it in one of the bedrooms will automatically pay the servant. However, you'll still have to fill it with gold periodically. Lastly, a Carpenter's Outfit is a must for that 2.5% boost to XP gained when training. A whole set costs 2,000 reward points from Mahogany Homes contracts. Consider doing a few tasks, even if only to get the outfit. Questing As with most skills, questing allows players to quickly skip the lower levels and get straight to efficient training methods. Questing is always highly recommended as each quest will bring its own array of perks on top of the experience it grants. Daddy's Home Minigame (Will get players to level 8 construction) Tower of Life Getting Ahead (Requires level 26 Construction and 30 Crafting) The Fremennik Isles (Need decent combat skills and prayer for the boss) Training Training construction in OSRS is straightforward but repetitive. All players need the fortitude to continue the grind and the bank account to support it. Beware that this skill can quickly eat away at your currency but rest assured it is well worth the investment. Levels 1 to 33: Basic Furniture In the beginning, the first 33 levels will consist of various pieces of furniture. In the Parlor room, players will craft the following as they unlock them: Crude Wooden Chairs Wooden Bookcases It won't be long before reaching level 9, where a kitchen must be bought to construct Wooden Larders. Players will create Repair Benches and Crafting Tables when moving onto the Workshop room at level 15. Make the best one available until reaching level 31. At level 31, the most efficient method is Carved Oak Tables in the Dining room. It shouldn't take long before progressing to the following step. Level 33 to 52: Oak Larders The Oak Larder is an ubiquitous option players use to level up as they are accessible at just level 33 and provide over 400k per hour experience. At experience rates like that, it will not be long before we move on to the next training segment. Keep in mind to get the best experience rates, players will have to employ better butlers as they unlock them. The best one, the Demon Butler, will be available at level 50. Level 52 to 77: Mahogany Tables The next method doubles the experience we are receiving per hour. This is done by building Mahogany Tables, which generate 900k experience per hour at peak efficiency. Using the table hotspot in the dining room with 6 mahogany planks will grant 840 XP each time one is built. A Demon Butler is a must for this method as you can only make 3 tables per inventory. In the time it takes to produce 3 tables and remove the last one, the butler will have returned with more planks to continue building. Rinse and repeat this method all the way up to level 77. Level 77 to 99: Mahogany Tables or Gnome Benches For the remainder of the levels, players can opt to continue building Mahogany Tables or move onto Gnome Benches. Gnome Benches can yield more experience per hour if done correctly and costs the same amount per experience point as Mahogany Tables. Gnome benches are built in the seating space found in the Superior Garden of a Player Owned House. When using 6 Mahogany planks with a saw and hammer, each bench will yield 840 XP. This method is more click intensive if using both seating spaces and grants over 1 million XP per hour. Alternative Methods of Training Level 1-99: Mahogany Homes Introduced in the game some time ago, Mahogany Homes is an in-game construction company that gives out contracts to players. These contracts will assign players to random NPCs across some of the major cities of Gielinor to build or repair items in the client's house. This is a slower and much cheaper method of getting construction levels. However, this is the only way to get the Carpenter's Outfit, a necessary set of equipment to train Construction. Level 50-99: Mounted Mythical Capes Upon completing the Grandmaster quest, Dragon Slayer II, players will have unlocked the Mythic Cape. This cape can be mounted in a Player Owned House with teak planks. Each time the mantle is reused, only 3 teak planks are needed to grant 370 experience points. This is an excellent alternative for Ironmen as the other planks are not as easy to obtain. Level 66-74/99: Teak Garden Benches Cheaper but slower than Mahogany furniture, Teak Benches are an excellent alternative starting from level 66. Some might even prefer going with these all the way up to 99. However, it requires perfect click timing for the best results. Ideal timing can get up to 700k XP per hour, while the actual attainable average is around 500k-600k XP. Level 74-99: Oak Dungeon Doors As a cheaper alternative to obtaining level 99 in Construction, players can construct Oak Doors in their dungeon or treasure room. This method is generally 30-40% cheaper than mahogany tables, and players can consistently get 300k-500k experience per hour. Is There A Cheaper Method? Construction can be expensive to train. Just buying the materials alone can cost millions of gold. Typically, spending gold is the fastest way to get to 99 with this skill, but Ironmen can't go to the GE and buy materials in bulk. Here is a suggested method of training that keeps the costs down. Stick to oak larders up to level 74, then at level 74, switch to oak dungeon doors all the way to level 99. You will need 198,970 oak planks for this, and you'll earn just 450,000 experience an hour, with a human butler fetching planks for you. The cost will be 85 million but will take twice as long as the mahogany tables. So, to summarize, we have the same method up to level 33. At that point, you can start creating oak larders. Keep crafting oak larders to level 74, then switch to oak dungeon doors. If you go for the cheapest options listed, you'll spend about 90 million if you craft the planks yourself up to level 74. In contrast, the most efficient methods will cost you just over 200 million. The caveat to using the cheaper options is spending double or triple the time to reach 99. If the most optimal route can be done in 30-40 hours, using cheaper methods can go up to five times as long. With high efficiency (aka perfectly-timed clicks), it can go as low as triple as long. Still, you'll have to choose between saving gold or saving time. Conclusion There are plenty of methods to mix and match as you grind to your desired level. Be sure to keep on top of your daily money makers and be realistic with what level you can afford. You will not be disappointed with the money you invest into your house and Construction skill in OSRS. Useful Quests Useful Items Low Cost Training High Cost Training The Eyes of Glouphrie: 250 EXP Tower of Life: 1,000 EXP Cold War: 1500 EXP Darkness of Hollowvale: 2000 EXP Great Brain Robbery: 2000 EXP Making Friends With My Arm: 2000 EXP The Fremennik Isles: 2000 EXP When using this saw over a conventional one, you will get an invisible +3 boost to your Construction level. This is a quest reward from The Eyes of Glouphrie. Cup of Tea (clay, gold or white) In addition to the crystal saw, this gives a boost to your construction level. With a white cup of tea and the saw, you will get a +6 boost to build higher tier items. These teas are created from scratch within your POH kitchen using your 4 butler. Spicy Stews (RFD) If you are desperate for a boost to build high-level items, spicy stews from the Evil Dave RFD sub-quest is the high possible boost with +5. You will have to gather lots of colored spices until you get the right stew combination. Teleport Tabs or Runes Chances are you will need to do a whole lot of teleporting when banking or creating planks. It is possible to do with minimal teleporting, but that ultimately depends on the training method. Woodcutting Axe If you plan on cutting your own logs for these training methods, you will obviously need an axe. Since most logs are rather at a low level, just a Rune Axe will do. Planks For most construction training methods, planks of all sorts are the center of everything. Planks are made with certain types of logs at the sawmill. Planks are made with certain types of logs at the sawmill. Planks Nails are used to create certain items in your house, particularly items using regular planks. Metal nails vary from bronze to black to rune. Most types of nails may be bought from the Sawmill at a rather cheap price. Bolts of Cloth These are used in some objects like beds or rugs. While most players won't use it for training, it is useful at all levels while making an upgrade to your house. The only way to obtain it is from the sawmill operator. Flaming Bag Considering that this item is used in a distant minigame in Mortaynia, it's quite odd for it to be suggested for construction training. The underrated perk of this item is the ability to store 60 limestone bricks, which is similar to the mechanic of a coal bag. It has a niche use later mentioned in this guide Low Cost Training Crude Wooden Chair (1 - 3/5) There isn't really anything else more interesting to start off with than making crude chairs. This will be made in the Parlour of your home, which is the only room available anywhere. You will need a saw, nails, hammer and your planks as a minimum to get started. If you have access to the Flamteur shop, you can store enough planks to finish without banking. Having plenty of nails in your inventory as there is a high chance that some will bend, even higher tiered nails. Make a chair, destroy it, and do it again. Keep in mind, making flatpicks of chairs will not give experience so don't waste your materials. The preliminary levels of Construction won't cost you too much money if you buy regular planks, but you can still obtain them yourself. Just outside the Barbarian Outpost, there is a plank spawn near the bank. Simply hop worlds every 4 planks until your inventory is full. Alternatively, planks may be bought at Razmire's shop in Mort'ton, or gathered near the Fishing Trawler. Ultimate Ironman that have trouble managing inventory space for money could make the long walk to the Entrana plank spawn for tree materials. You need a means of dropping or storing any weapons or armor to do this, though. As for nails, you can buy bronze or iron nails from any sawmill for next to nothing. You can also buy bronze bars from the Al Khariid shop and smith your own managing as a means to save money or if you are an Ironman. Clay Fireplaces (3 - 5) Clay spawners are a particularly cheap item, but it can still be a viable method if you mine it yourself. Nearby the Rimmington portal is both a clay mining spot and a well, so you can make your own materials without a bit of cost. Since a piece of clay only gives 10 experience, this isn't really viable past a few levels of training. If you plan on buying material from the Grand Exchange, you might as well go with a method using planks. Clay isn't a very cost-efficient material at the current market price. Decorative Rocks (5 - 40) This item is used in the centerpiece of your garden, but since the default one is taken up by the portal, you will have to purchase a second room. Right at the center of it, you can click the centerpiece spot and there you will have the option for a decorative rock Each spot takes 5 limestones and give 100 experience. Simply trade in new limestone at a un-certing vendor in the general store. If you are an Ultimate Ironman or just doing a very low-budget training build, this is the best you're going to get until Level 40. Limestone is simply the most cost-efficient material in the game, whether you buy it from shops or from the grand exchange. If you want to save even more money, you can get crude limestone and chisel each piece yourself. This is also a means to get passive crafting experience between bank trips. Limestone Attack Stones (40 - 74/99) Creating limestone attack stones is basically the same method as above but with the ability to use 10 stones at a time. Simply create a games room near the portal and create and destroy 2 stones before banking. It is quite a bit faster than the above method, with the potential to get over 200 million gold to quickly complete. High Cost Training Regular Plank Furniture (1 - 19/33) To speed through the low-level content, there isn't any alternative to using regular planks and nails to create wood furniture at your level. This starts with crude wooden chairs from level 1, and then you may choose to do bookcases, tables, and other items until you hit your goal level. The nails you use are definitely a factor in training considering the rate they bend affects experience rates. If money is no object at this level, you might as well use decent nails like steel or higher. Lost nails result in lost ticks when building, and bronze is the worst performing of them all. You may get diminishing returns if you want to use nails like adamantite or rune. Even though the method mentioned in the low-cost section recommended gathering your own planks, you are better off buying them off the GE for powerleveling purposes. You may un-note them from Phials or teleports to the bank between runs. Since you can easily get into the rhythm of creating regular plank furniture, you might as well grind your way to level 33. If you want to be a bit more efficient, there is something else you can do at level 19. Iron Exit Portals (1-19) An unconventional yet slightly faster means of starting construction out is using iron bars to create exit portals in the garden. It requires 10 iron bars each and gives a 100 experience drop per build. As you might imagine, it is a bit more costly for the marginal gain in experience. People who mainly benefit from this would be limited ironman or ultimate ironmen that need an alternative means to start training the skill. The most famous example would be UIM Verf using this method on his Karamja-locked UIM since he had no access to a saw or other basic materials. There are other items that may be constructed using metal bars at later levels, but it comes with severely diminishing returns since so much else is unlocked. Oak Chairs (19 - 33) Oak chairs are the first tier of oak plank items available, and it's only natural to progress to them to bolster experience rates. You can create these in the same spot as your crude chairs at the same speed, just with a bit more experience per plank. Keep in mind, the cost difference between oak and regular planks is quite negligible compared to the experience gain. You may move on to other random item spots around the house as you progress, like oak shelves, bookcases or tables in the kitchen. This is keeping in mind that oak planks give the same amount of experience, regardless of the item. Oak Larders (33 - 52) For the longest time, oak larders were considered to be the meta for construction training. While it is indeed fast, higher-level methods had proven to be much faster. Having said that, it is still a superior low-level method until you can unlock new content. Larder are built in your kitchen, and it just happens to be in the corner further away from your portal. To train efficiently, most players opt to un-note oak planks using a butler and just building away. You may easily get well over 300,000 experience per hour, albeit being expensive for a low-level method. Optionally, you can also build tables whenever you have extra planks leftover, taking advantage of the time gap when waiting for your butler. For ironmen, it can still be a convenient means of training if one cuts their own logs. A quick and dirty method would be to cut oak logs just outside the Rimmington portal, having the

butler send them to the sawmill, and building once they arrive. This can be done without much of a sacrifice in experience. Be sure to check out RSGoldFast for the best OSRS gold shop! Mahogany Bench (52 - 66/99) The mahogany bench is a seat placed in your throne room, garden or kitchen, and it uses 6 mahogany planks each. Considering that mahogany is the highest-tier plank, it gives the most experience with the highest cost per action. Although, at level 52, you are basically doing an end-game training method at a very low level. The method that makes these the fastest experience in the game is not easy, but it is over 1 million experience per hour when executed correctly. This is used with the variant gnome benches built into the corner of the parlor. The idea is to build 2 benches within a sort span of in-game time before your butler comes back from a bank run. You will want to build a superior garden and leave as close to your portal as possible if you don't plan on using a butler. As you stand between the two benches in the corner, have your camera zoomed in quite close and send your butler to the bank for a load of planks. While you have the final dialog to send him off, have the build space ready on right click and send him off. This allows you to instantly build in the spot and then quickly build in the other spot. With quick enough execution, you will build in both spots within the same game tick. If you are using Runelite, you can set up screen markers to make your aim a bit more accurate. The tricky part is to remove the benches in a timely fashion before you butler arrives. Try to execute this as quick as possible, considering that there is not trickery other than a fast mouse and a sharp eye. There is around a 6-7 second window of opportunity to build the benches before the butler makes the bank trip. When your butler comes back with an automatic dialog with your new set of planks, repeat the step above and keep building. It is a tedious, repetitive and expensive method, but it's also the most efficient means of buying 99 construction. For ironmen, mahogany logs are significantly harder to come by but there are some reasonable means to accrue them. For starters, it is a common drop if you are grinding Zulrah, and you may end up with hundreds before your Blowpipe. It can also be cut on Fossil Island, converted to planks with the Plank Make spell, and then banked at the nearby chest. Mahogany Tables (52 - 66/99) Mahogany tables are what used to be considered the meta to high-level training until players discovered benches were faster. It still deserves a spot towards the end of this guide since it is much less click intensive while being able to gain 800,000 experience per hour. It should also be considered that the mahogany bench method could be patched in the future. Each table is 6 planks, making it more experience per item than benches, although you only have one spot to build it. You simply build the tables, send the butler for a bank trip, and keep repeating the process. It is similar to oak larders since it's also in the kitchen, just with faster experience and more money involved. Teak Dining Tables (52 - 66/99) The sister method to mahogany tables are tables made out of teak. Considering it has the same level requirement as 52, it is the slightly less expensive means of meta construction training. Having said that, this method can easily achieve over 400,000 experience per hour with minimal effort. It is also built in the same spot as mahogany tables, so you can mirror the method above. Teak Garden Bench (66 - 99) Teak Garden Benches deserve a special mention since it is one of the fastest training methods due to the new garden method. Similarly to the mahogany bench method, you will want to do this in the garden spot right in the corner so you have access to both simultaneously. Each build gives 540 experience each, which is quite a bit less than mahogany. That being said, you can expect around 600,000 experience per hour when executed flawlessly. This isn't quite bad considering that teak planks are only slightly more expensive than oak, although it is less cost-efficient than doing the Mounted Mythical Cape method. This method may be more desirable by ironmen since teak logs are obtained from the Throne of Miscellania passively and are easily cut by teleporting to Ape Atoll. The only other meta training method would be oak larders or dungeon doors, but with slightly less experience and cost.
